

Technical Bulletin

Genes that fit *your* farm.

SeCan

Canada's Seed Partner

CDC Glas

Flax

Adaptation:

- All flax growing areas of western Canada

Pedigree:

- CDC Bethune/CDC Mons

Strengths:

- 103% grain yield of CDC Bethune across all zones in the western coops
- 105% of CDC Bethune in the black soil zone
- Resistant to flax rust and moderately resistant to fusarium wilt
- 1.9% higher linolenic acid content than CDC Bethune

Neutral Traits:

- slightly taller than CDC Bethune
- 0.5 days later maturing than CDC Bethune

Weaknesses:

- Seed and meal protein less than the check Flanders in western coop trials

Breeder:

Dr. Gordon Rowland
Crop Development Centre
University of Saskatchewan
Saskatoon, SK

2009 to 2010 Western Cooperative Flax Registration Trials

Variety	Yield (% Flanders)	Maturity (days)	Lodging 1 = erect 9 = flat	Height (cm)	1000 Seed Weight (cm)	Oil Content (%)	Iodine Number	Linolenic Acid Content (%)	Protein Content (%)
Flanders	100	110.2	2.8	54.6	5.8	47.0	196.4	59.4	39.1
CDC Bethune	111	110.5	2.5	58.8	6.3	47.2	192.6	56.5	39.5
CDC Glas	114	111.2	2.2	60.3	5.7	47.4	196.0	58.4	37.9

All Certified seed of CDC Glas originates from the re-constituted Breeder seed crop certificate: #110000041504 and can be traced to this lot from every generation of production. The Breeder seed was carefully screened, and tested at every stage of production to be free of Triffid.

In addition all seed lots of re-constituted CDC Glas are produced in accordance with the additional certification requirements outlined by the breeder. These additional steps include:

- 1) Extended cropping history (five years out of flax in 2012, three years out of flax in 2013).
- 2) Equipment use restrictions (in the year of production only equipment handling pedigreed flax could be used).

Re-constituted
